

## **Trade Jurisdiction of Cement Mason & Cement Mason Apprentice, as set forth in OP&CMIA Constitution**

### **Preparation**

All preparatory work on concrete construction to be finished, rubbed, sacked or repaired, such as sandblasting, bead blasting, cutting of nails, wires, wall ties, all grinding, bush hammering, chipping, rubbing done by machine or by hand and epoxy injection in connection with concrete patching, repair and the finished product.

### **Concrete Form Setting**

The setting and stripping of all concrete forms, including, but not limited to all screeds, perimeter forms, tilt-up, curb and gutter, sidewalk, manholes, channels and all other structure forms, stakes and grades of lumber, metal or other material used as forms that hold concrete to shape, line or elevation. The setting of all expansion materials in all concrete construction that serve as a forms, sets elevation or simply serve as an expansion joint.

### **General Finishing Applications**

All concrete construction, including foremanship of the same, such as buildings, bridges, silos, tunnels, elevators, smoke stacks, curb and gutter, sidewalks, streets, highways, paving, alleys, reservoirs and cementitious roofs. The laying, spreading and finishing of all types of bituminous concrete, including all types of floors and pavements. All mastic flooring work, whether laid free handed or precast form on the job site; otherwise known as asphalt or mastic, all resilient floor covering. The finishing, dusting, staining, hardening, washing or sandblasting of all concrete construction, including gypsum roof construction, the use of any color pigment, when mixed with cement, in any form, mosaic and nail coat whether done by brush, broom or trowel, float or any other process. All decorative applications, such as stamping, exposed aggregate, glass embedment, etc. The straight edging and or finishing of all foundations and walls when poured to a definite elevation. The rodding, spreading, tamping, bull floating, bump cutting, joint placement and finishing of all cementitious materials including top materials, sill, coping, steps, stairs, risers, the running of all cement and plastic material on all base work. Prefabrication and prestressed concrete, on site or at the shop, Gunitite and shotcrete including the nozzleman. All pervious concrete applications

### **Concrete Patching and Repair**

The pointing, patching, sacking, dry packing and caulking around all window and door frames that are against concrete. The spreading and finishing of latex materials when used for patching or leveling of floors. All dry packing, grouting and finishing in connection with bottom plates, column bases and all machinery pads, i.e.: engines, pumps, generators, compressors and leveling plates. The preparation in connection with all patching or pour backs, dry packing and grouting, such as bush hammering, needle gun, bead blasting, grinding or sandblasting of existing sub straight to allow adherence of the material to be applied. All crack chasing and epoxy injection related to concrete construction and repair.
